

XM instant traffic and weather services is what makes the difference in satellite radio and FM radio as well as being commercial free. Why should Americans be exposed to so much advertising causing Americans to compulsively spend and possibly lead to bankruptcy when our option is to pay 10 dollars a month to have commercial free entertainment in our cars? Also why should Americans be forced to sit in traffic for hours because of an accident we did not know was ahead which causes unneeded stress in a already extremely fast paced country? If you haven't experienced XM then you don't understand the quality of time that you experience when you are in the car 3 hours a day like myself driving from home to college to work to home again. I support XM radio and hope to see their channel line up include weather and traffic reports for all major cities accross the United States as well as increase their channel up as a whole to provide even more variety than it does today. XM radio is incredible and it shows our progression of technology. Please allow XM to continue to grow and improve itself the way that cell phones, computers, and television has. We are Americans that deserve a choice under the first admendment. Please protect our rights to have that choice. If an individual is offended by what they are exposed to on the computer, the television, radio or satellite radio they have a choice. By taking away that choice of being exposed to that mediam it's a dictatorship not a democracy.
